New Product Announcement No. 2017-08

expansion

T-BURST HIGH PRESSURE

2mm T-BURST Tool Holder Expansion

 **TaeguTec**
Member IMC Group

KEY POINT

The T-BURST's 2mm holder product line has been expanded to meet overwhelming demand due to its excellent performance and high productivity in grooving and parting of difficult-to-cut materials.

The newly added **2mm T-BURST** holders provide the same superior performance as the current line and are available for existing automatic Swiss lathe holders as well as general type holders.

Using the same efficient side-clamping method for tool mounting, users can easily change inserts in a matter of minutes. Also, the three coolant channels on both the right and left sides of the 2mm expansion holders means a steady coolant supply to both the cutting edge as well as the workpiece for effective cooling during machining.

This addition of **2mm T-BURST** holders enables superior machining solutions with improved tool life and higher productivity on difficult-to-cut materials.

All the new 2mm holders are interchangeable with the current 2mm inserts.

Availability

In stock

Price

Available in the GAL system

T-BURST assembly guide

■ TTER/L-TB

High pressure coolant flow is supplied to the insert's cutting edge from the tool holder's internal coolant channel therefore allowing effective cooling, increased tool life while preventing built-up-edges.

* 2525 holder type (2020 holder type has 3 coolant inlets)

■ TTER/L-SH-TB

Designed with three coolant inlets, these holders are easily adaptable to different machine types and the side clamping design means convenient insert mounting.
